Piano Artistry of Amparo Iturbi Sparks Civic Symphony's Concert

A warm, appreciative audience greeted the world renowned pianist Amparo Iturbi at Redondo Auditorium when she appeared as soloist with the South Bay-Torrance Civic Symphony last week. Superlatives do not suffice to describe the magnificent perfection of the work of this great Spanish artist. Her every tone rings with its individual power, each phase is

perfection of interpretation, and her personal gracious charm endears her to her listeners. She received an ovation after playing the Chopin "Andante spianato and Polonaise." The applause mounted after the Mendelssohn "Rondo Capriccioso" and again after the "Three Preludes" of Ger-

end (Malaguena). Even after she encored with another Chopin and a waltz by her brother Jose Iturbi the audience was loath to let her stop. THE ORCHESTRA, too, received its share of well-deserved praise. Under the flashing baton of Elyse Aehle, they gave a brilliant performance of Mendelssohn's "Italian" Symphony and Weber's

Oberon overture and received rousing applause after the final number, Finlandia, which displayed a fine brass section to match the amazing skill of the lithe strings. Many important community leaders were recognized among the audience as well as such important musical leaders from Los Angeles as John te Groen, executive secretary of the Music Commission of Los Angeles County, and former president of the Musician's Union, who was introduced by Symphony president, Jan Darian. He spoke a few words in praise of the fine work of Conductor Elyse Aehle.

Eclipse Will Occur Here

A total eclipse of the moon will occur Friday, Dec. 18, according to Dr. C. H. Clemminshaw, director of Griffith Park Observatory. In Los Angeles the moon will rise at 4:37 p.m. and will enter the earth's shadow at 5 p.m. The total eclipse will last exactly one hour, from 6:08 to 7:08 p.m. The moon will leave the earth's shadow at 8:16 p.m. Usually the moon is still visible when totally eclipsed, Dr. Clemminshaw said, because

the earth's atmosphere acts as a lens to bend some of the light. DR. CLEMINSHAW added that if there are thick layers of clouds through which the sunlight passes, the moon will be darker than usual and may even disappear, as it did a year ago. A lunar eclipse can be observed very well with the unaided eye. However, the telescope at the observatory will be available for the public to view the moon during the eclipse.
